(54) Title: METHOD OF, AND APPARATUS FOR, PROTECTING FROM RADIO FREQUENCY INTERFERENCE

(57) Abstract: A method of protecting an apparatus from radio frequency interference, comprises a policing terminal (PT) detecting
the presence of an interfering radio terminal (16) in the protected environment and actively rendering ineffective or terminating trans-
missions by the interfering radio terminal. Various options can be followed by the policing terminal (PT) including (a) attempting
to become the master station of a network of which the interfering terminal is a member and instructing the members to close down
or (b) failing to become the master station and transmitting interference signals for at least a selected portion, for example preamble
and sync, of the duration of a data packet transmitted by the interfering station.
